

Use case analysis

The following user stories are to be supported in Iteration 2:

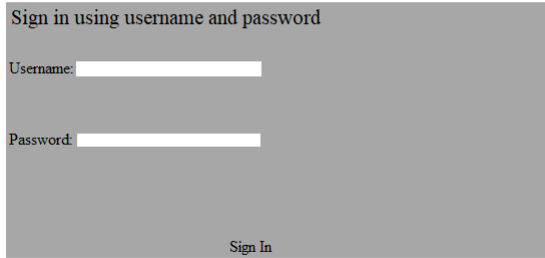

1. As a user (cashier or manager), I want to log in the system
2. As a user, I want to change my login password
3. As a user, I want to change my display/profile photo
4. As a cashier, I want to check out an order
5. As a manager, I want to add a new product into the system's database
6. As a manager, I want to update a current product in the system's database
7. As a manager, I want to create a new user, assign role (e.g. manager or cashier), generate a default password for a new user
8. As a manager, I want to view and sort the business report: e.g., what products are sold, how many units, how much revenue...

Task: Write a detailed use case for each user story. At each step, a prototyped screen should be provided, sketching how the system might look and work.

Use Case 1: Logging in

Description: As a User (Manager or Cashier), I want to log in to the system.

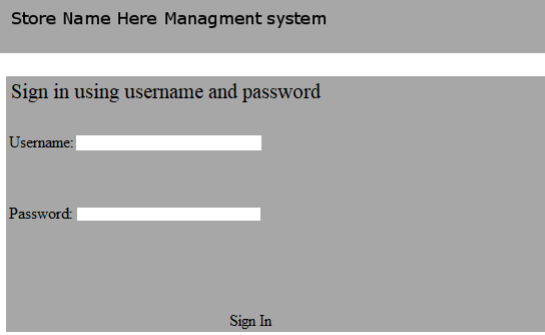

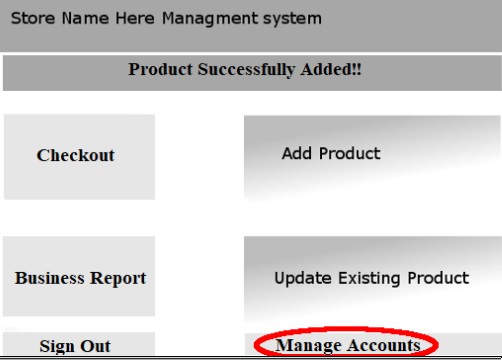

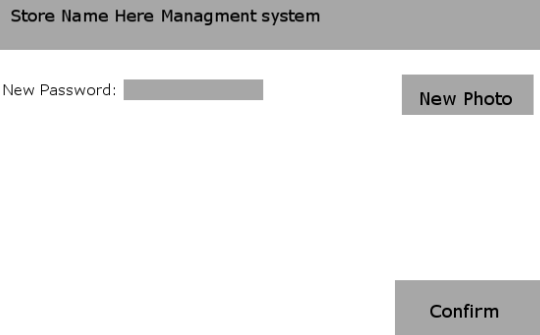

Actors: Manager, Cashier

<p>Step 1: When the System is booted / loaded, a login screen is displayed with a Username and Password field, along with a clickable button to log in to the system. The Password field is obfuscated – i.e. is not shown in plaintext.</p>	
<p>Step 2: When a username and password are entered, the system checks them against valid usernames and passwords stored in the backend. If the credentials match a single entry, they are logged in with the appropriate role.</p> <p>The Manager's 'Main Screen' view is displayed to the right, Cashier's view should only contain the 'Checkout', 'Sign Out', and 'Manage Accounts' buttons.</p>	

Use Case 2: Password Change

Description: As a User (Manager or Cashier), I want to add a new product into the system's database

Actors: Manager, Cashier

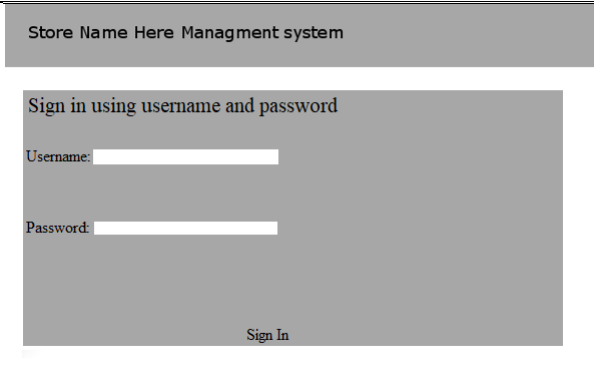

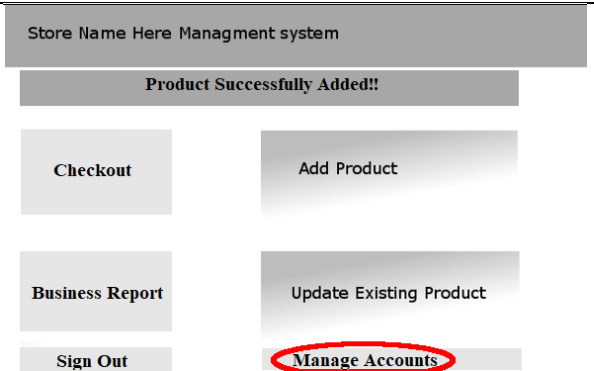

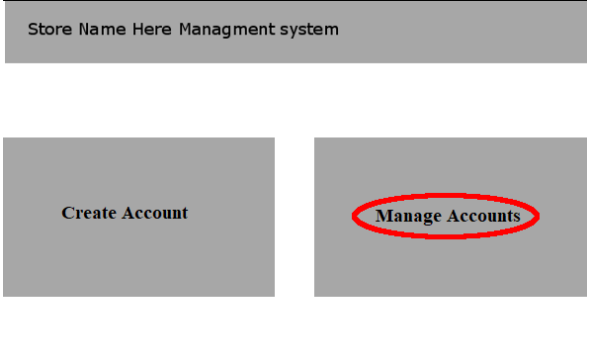

<p>Step 1: A User should enter their Username and Password to login to the account on which the password is to be changed.</p>	
<p>Step 2: Upon successful login, the User clicks 'Manage Accounts'</p>	
<p>Step 3: A Manager would press 'Manage Accounts' on the following screen, a Cashier would not see this screen.</p>	
<p>Step 4-1: A Cashier sees a screen with only a field for managing their own account's password.</p>	

<p>Step 4-2: A Manager sees a screen with a list of all accounts, with the ability to manage them. The manager does not see any passwords. Only a field for them to enter a new password for themselves.</p> <p>A manager may not remove themselves.</p>	<div><div>Store Name Here Managment system</div><div><div>New Password: <input type="password"/></div><div>New Photo</div></div><div><table><tr><th>User</th><th>Role</th><th>Created</th></tr><tr><td>User 1</td><td>Cashier</td><td>3/5/2016</td></tr><tr><td>User 2</td><td>Manager</td><td>4/3/2004</td></tr></table></div><div>Confirm</div></div>	User	Role	Created	User 1	Cashier	3/5/2016	User 2	Manager	4/3/2004
User	Role	Created								
User 1	Cashier	3/5/2016								
User 2	Manager	4/3/2004								
<p>Step 5: The User then ‘Confirm’s their changes. A password field left blank is an unchanged password.</p>	<div><div>Store Name Here Managment system</div><div><div>New Password: <input type="password"/></div><div>New Photo</div></div><div><table><tr><th>User</th><th>Role</th><th>Created</th></tr><tr><td>User 1</td><td>Cashier</td><td>3/5/2016</td></tr><tr><td>User 2</td><td>Manager</td><td>4/3/2004</td></tr></table></div><div>Confirm</div></div>	User	Role	Created	User 1	Cashier	3/5/2016	User 2	Manager	4/3/2004
User	Role	Created								
User 1	Cashier	3/5/2016								
User 2	Manager	4/3/2004								
<p>Step 6: The User is returned to the main screen when all edited accounts have been updated in the system.</p>	<div><div>Store Name Here Managment system</div><div>Product Successfully Added!!</div><div><div>Checkout</div><div>Add Product</div></div><div><div>Business Report</div><div>Update Existing Product</div></div><div><div>Sign Out</div><div>Manage Accounts</div></div></div>									

Use Case 3: New Photo

Description: As a User, I want to change my display/profile photo.

Actors: Manager, Cashier

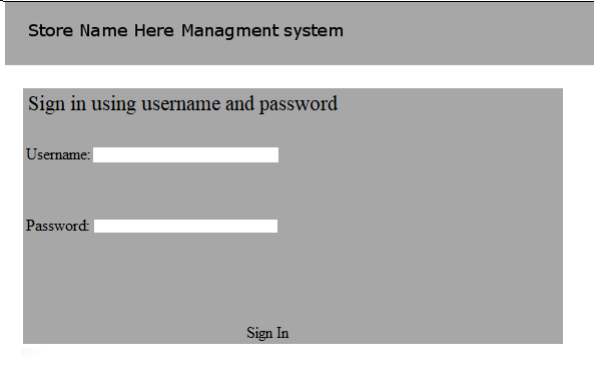

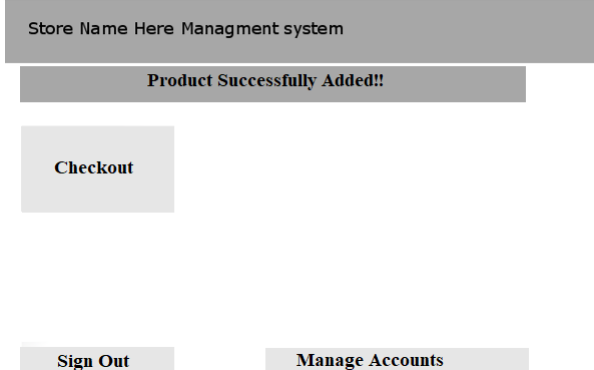

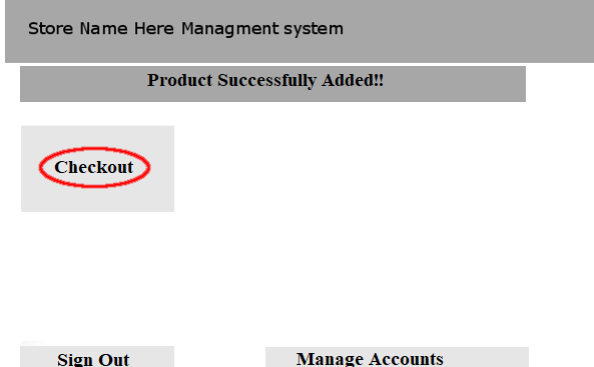

Step 1: A User should enter their Username and Password to login to the account on which the photo is to be changed.	
Step 2: Upon successful login, the User clicks 'Manage Accounts'	
Step 3: A Manager would press 'Manage Accounts' on the following screen, a Cashier would not see this screen.	

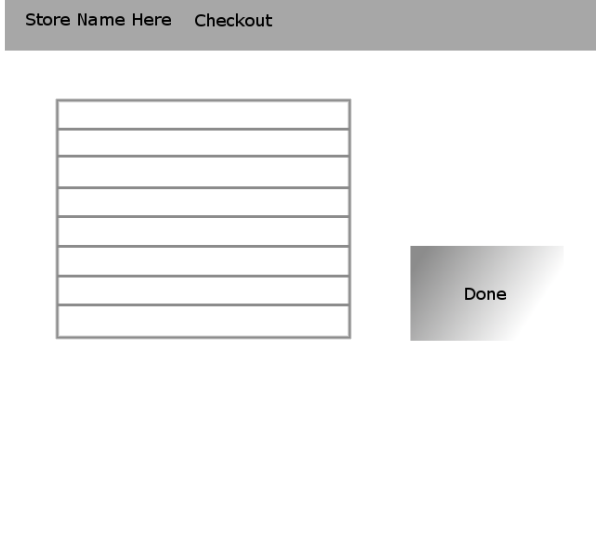

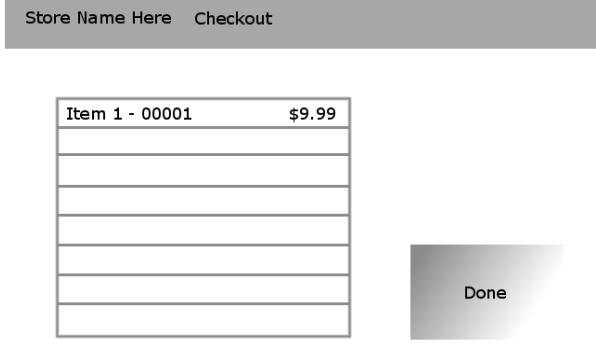

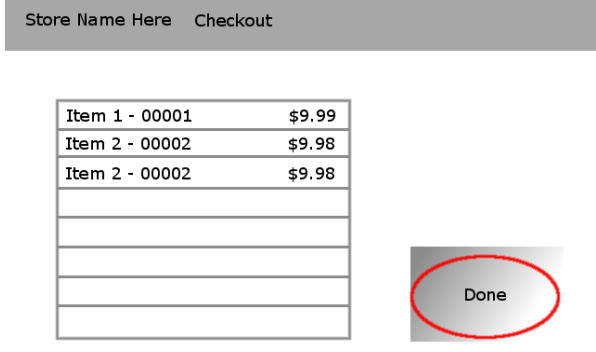

<p>Step 4-1: A Cashier now presses ‘New Photo’ on this screen.</p>	<div><div>Store Name Here Management system</div><div><div>New Password: <input type="password"/></div><div>New Photo</div></div><div>Confirm</div></div>									
<p>Step 4-2: A Manager would press the same ‘New Photo’ button.</p>	<div><div>Store Name Here Management system</div><div><div>New Password: <input type="password"/></div><div>New Photo</div></div><div><table><tr><th>User</th><th>Role</th><th>Created</th></tr><tr><td>User 1</td><td>Cashier</td><td>3/5/2016</td></tr><tr><td>User 2</td><td>Manager</td><td>4/3/2004</td></tr></table></div><div>Confirm</div></div>	User	Role	Created	User 1	Cashier	3/5/2016	User 2	Manager	4/3/2004
User	Role	Created								
User 1	Cashier	3/5/2016								
User 2	Manager	4/3/2004								
<p>Step 5: The following screen depends on the implementation of the system:</p> <p>If we are working on an embedded system, this function is only available on systems with a camera. And as such the view of the Camera would be loaded, allowing the user to touch the screen to take a photo.</p> <p>If this program is running as an application, then we simply browse for an image file. A size and filetype limit should be imposed on the file selected.</p>	<div><div></div><div></div></div>									
<p>Step 6: The image is processed and resized to appropriate dimensions to be displayed as a profile photo, stored within a database of profile photos, each entry linked to a User.</p>										

Use Case 4: Checkout

Description: As a Cashier, I want to check out a customer's order.

Actors: Cashier

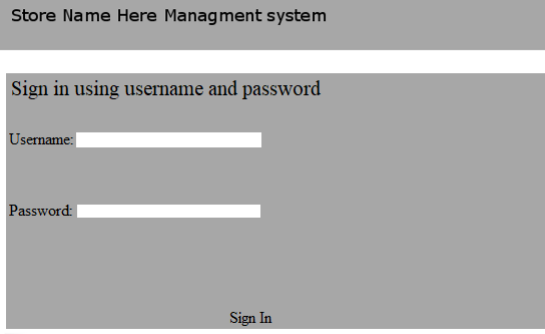

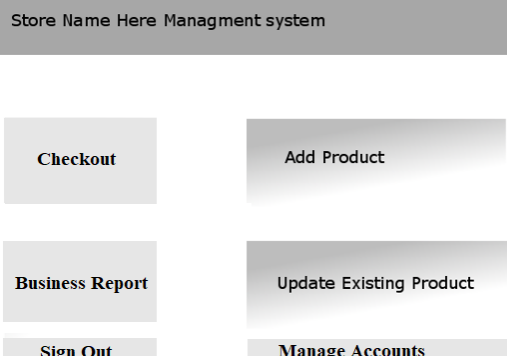

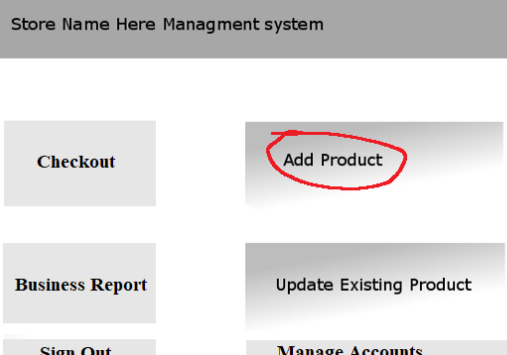

Step 1: A Cashier should enter their Username and Password to login to their account.	
Step 2: The System then displays the main screen.	
Step 3: The Cashier will press 'Checkout', taking the user to a separate, checkout screen.	

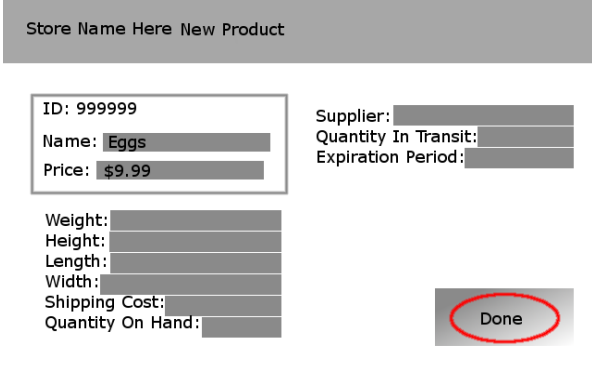

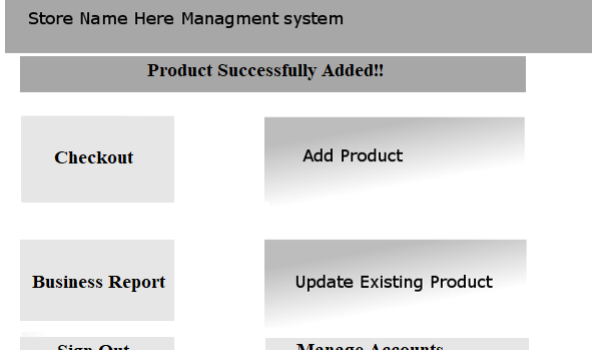

<p>Step 4: This step is dependent on the type of system being implemented.</p> <p>On an embedded system, once on the checkout screen, the Cashier scans barcodes on the external scanner, sending info to the embedded system.</p> <p>If the system is an application, an interface with a USB barcode reader could be implemented.</p> <p>Alternatively, a manual barcode entry could be added (in either version) and supplement/replace the scanner. This allows the Cashier to, by hand, input an item whose barcode is un-readable or missing (following a product lookup).</p>	
<p>Step 5: For each item in the order, Step 4 is repeated.</p>	
<p>Step 6: Once the Cashier has scanned / input every item in the order, the Cashier should press 'Done'.</p> <p>The order is added to the Order Database for storage and further processing (namely financial.)</p>	
<p>Step 7: Once processing is complete and a financial transaction has occurred (if needed) the Cashier is returned to the main screen.</p> <p>If the system is embedded, a receipt would be printed.</p>	

Use Case 5: Add new product to system database

Description: As a manager, I want to add a new product into the system's database

Actors: Manager

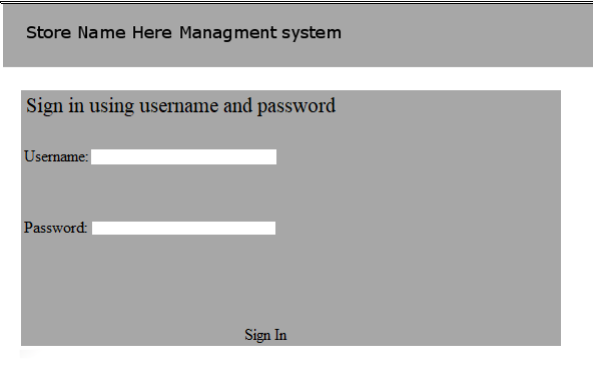

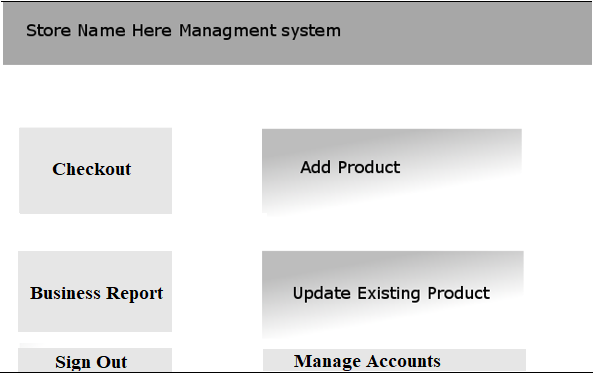

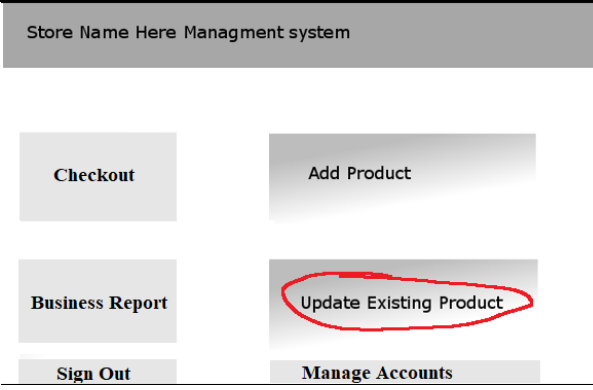

Step 1: Login in as Manager	
Step 2: Display the Manager Main Screen	
Step 3: User presses 'Add Product'	
Step 4: A new display appears with text fields for all configurable fields of an item – ID is automatically filled in to avoid conflicts, Price and Name are the only mandatory fields	

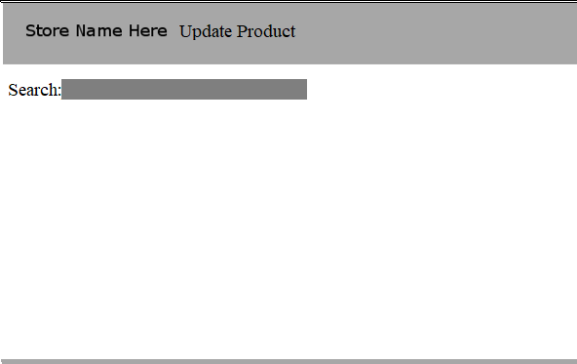

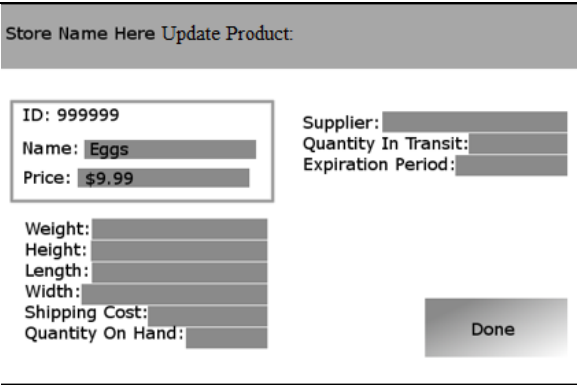

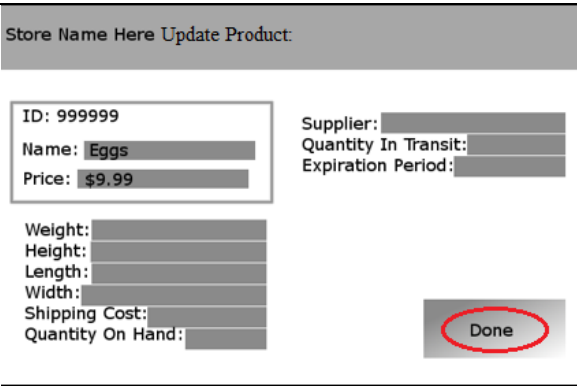

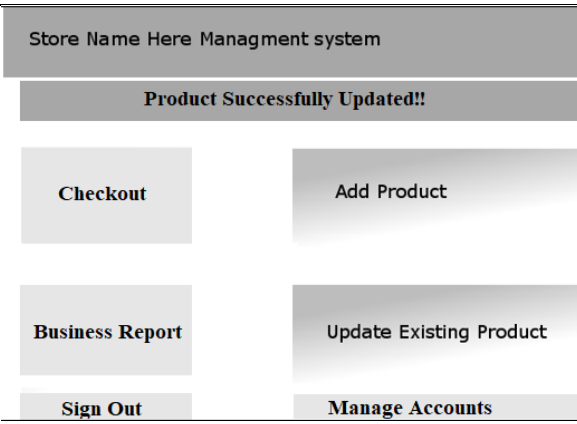

<p>Step 5: User enters all relevant information on the new product</p>	
<p>Step 6: User presses 'Done'</p>	
<p>Step 7: The new item is added to the system, returning the user to the main screen with a success message</p>	

Use Case 6: Update current product in system database

Description: As a manager, I want to update a current product in the system's database

Actors: Manager

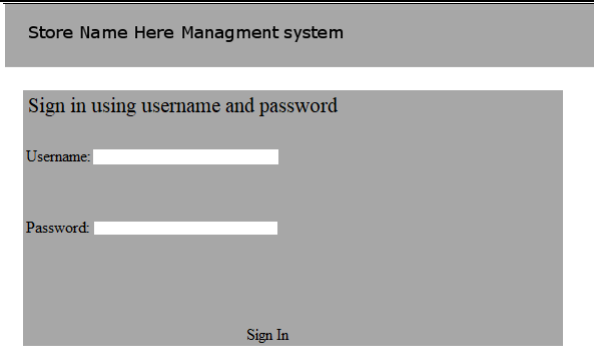

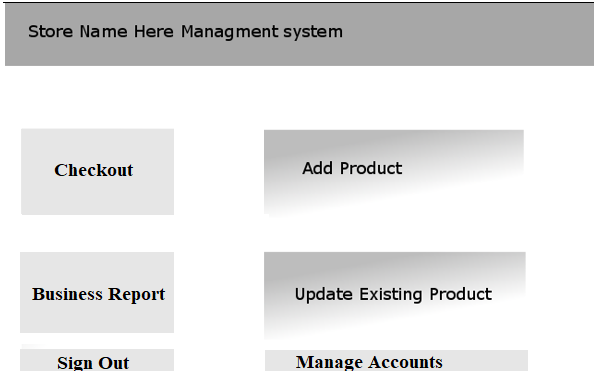

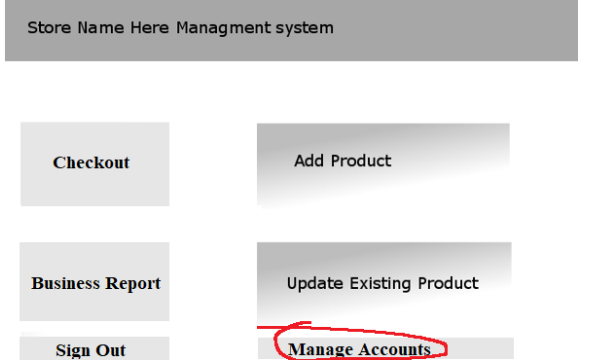

Step 1: Sign in as a manager	
Step 2: Display the Manager Main Screen	
Step 3: User presses 'Update Existing Product'	

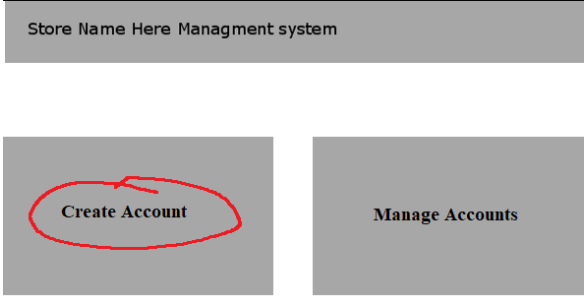

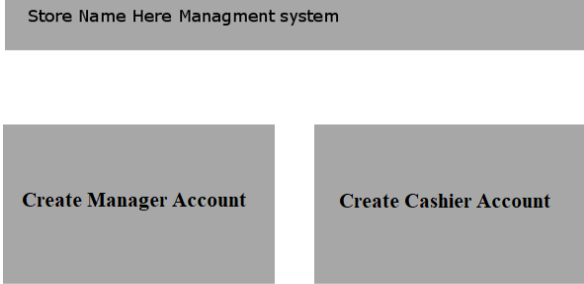

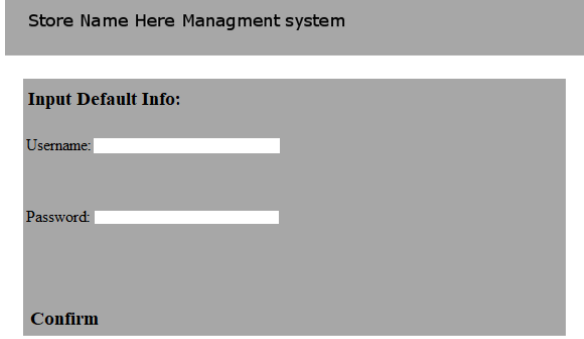

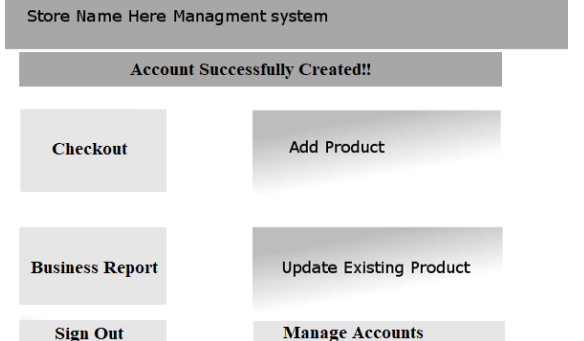

<p>Step 4: A new display appears with a search bar asking the name or barcode number of product that is being updated.</p>	
<p>Step 5: User updates information that needs to be changed for product</p>	
<p>Step 6: User presses 'Done' to save information</p>	
<p>Step 7: The product is updated within the system. The user is then sent to main menu with a message saying product update was successful.</p>	

Use Case 7: Create new user with default password

Description: As a manager, I want to create a new user, assign role (e.g. manager or cashier), generate a default password for a new user

Actors: Manager

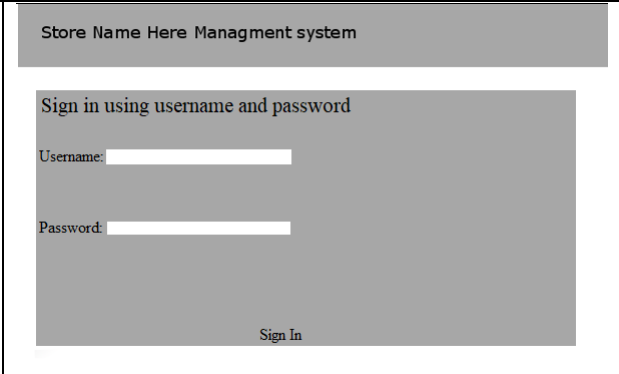

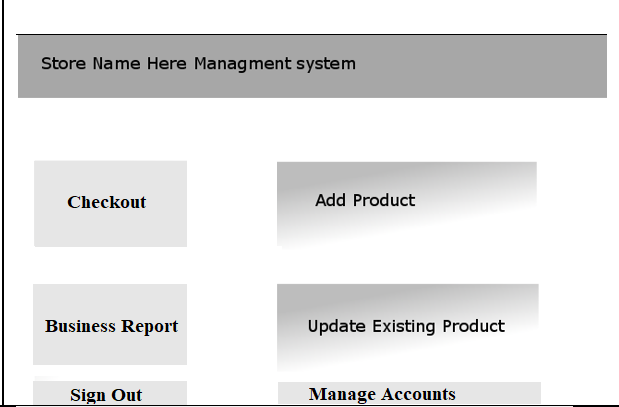

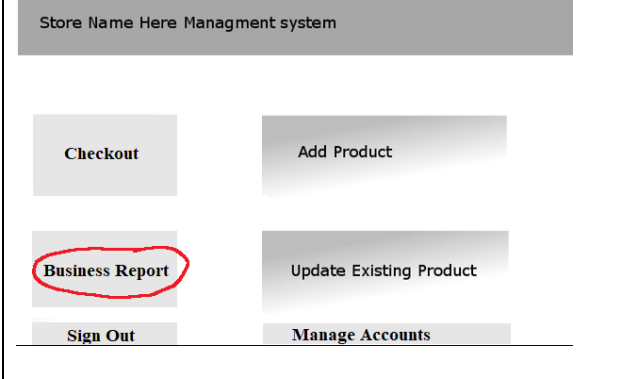

Step 1: Sign in as a manager	
Step 2: Display the Manager Main Screen	
Step 3: User presses "Manage Accounts"	

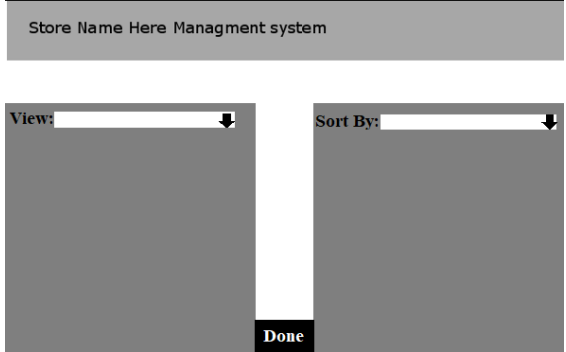

<p>Step 4: A new display appears with two options: Change account settings, Create new Account. Select Create new account</p>	
<p>Step 5: Choose which account to create, Cashier or Manager</p>	
<p>Step 6: Input default username and password</p>	
<p>Step 7: The new user is added to the system, returning the user to the main screen with a success message</p>	

Use Case 8: View and Sort Business Report

Description: As a manager, I want to view and sort the business report: e.g., what products are sold, how many units, how much revenue...

Actors: Manager

Step 1: Sign in as a manager	
Step 2: Display the Manager Main Screen	
Step 3: User presses "Business Report"	

<p>Step 4: Business Report Display appears with scroll down bars to select what to view and how to sort report by</p>	
<p>Step 5: Click Done button to return to main screen</p>
